

Child Maltreatment-Related Investigations Involving First Nations Children Aged 12-15 Years Old in Canada in 2019

Introduction

The data presented in this information sheet were collected as part of the First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect 2019 (FN/CIS-2019), a data collection effort to produce estimates of the incidence of reported and investigated child maltreatment in Canada. This information sheet is a part of a series of five information sheets which represent different developmental stages and examine disparities between First Nations and non-Indigenous children. Please refer to other information sheets available on the Canadian Child Welfare Research Portal (cwrp.ca) which examine investigations involving children of different age groups. An additional information sheet, also available on the portal, summarizes disparities in service dispositions for different age groups.

The FN/CIS-2019 sample (for all regions excluding Quebec) was drawn in three stages. First, a sample of 47 mainstream and 16 First Nations agencies was selected from a sampling frame that included all child welfare agencies in Canadian jurisdictions outside of Quebec. A three-month sampling period (October 1 – December 31, 2019) was then used to select cases within these sites. The final stage involved identifying child-level investigations meeting the study criteria. Complex survey weights were used to derive an estimate of child maltreatment-related investigations conducted in Canada in 2019 from these sampled cases. In Quebec, data were extracted from information systems from all agencies able to participate (this included data from six First Nations agencies). The data presented reflect the clinical judgement of the investigating child welfare worker and are point-in-time estimates of the front-end of the child welfare service continuum. Please see the *FN/CIS-2019 Major Findings Report* for a full description of study methodology.¹

Children 12-15 Years Old

Overall, First Nations children (aged 0-15 years old) in Canada were 3.6 times as likely to be investigated for maltreatment-related concerns compared to non-Indigenous children in 2019. Child welfare-involved adolescents are likely facing multiple, complex needs,² and First Nations children 12 to 15 years old were 3.5 times as likely to be the subject of a child welfare investigation in Canada compared to non-Indigenous children of the same age. This information sheet looks specifically at the profile of child maltreatment-related investigations involving First Nations aged 12 to 15 years old in Canada in 2019.

Investigation Type

Figure 1 describes the primary concern of investigations involving First Nations children 12-15 years old in Canada in 2019. The definition of child maltreatment-related investigations in the FN/CIS-2019 included both investigations focused on an alleged incident of maltreatment (maltreatment investigations) and investigations in which there was no specific concern of an alleged incident of maltreatment but where assessing the risk of future maltreatment for the child was the primary concern of the investigation (risk-only investigations). When workers indicated that their investigation was focused on alleged maltreatment, they could indicate one of five subtypes as the primary category of maltreatment – physical abuse, sexual abuse, neglect, emotional maltreatment, and exposure to intimate partner violence.

Figure 1. Primary investigation type in investigations involving First Nations children 12-15 years old in Canada in 2019

Thirty-one percent of investigations involving First Nations children aged 12-15 were focused on allegations of neglect. Twenty-nine percent of investigations for First Nations children in the age group assessed the risk of future maltreatment, and the remaining 12, 11, 10, and seven percent were focused on exposure to intimate partner violence, physical abuse, sexual abuse, and emotional maltreatment, respectively.

Child Functioning Concerns

Participating workers were asked to indicate the investigated child's functioning on the basis of 18 concerns that would be possible to assess in the initial investigation period (see the FN/CIS-2019 Major Findings Report for a complete list of the functioning concerns that were captured as part of the study).³ Based on their clinical judgement, workers could indicate if these concerns were confirmed, suspected, not present, or if the presence of the functioning concern was unknown by the investigating worker at the time of the child welfare investigation. Functioning concerns were considered to be noted when the investigating worker indicated that the concern was either "suspected" or "confirmed."

Figure 2. Most frequently noted child functioning concerns in investigations involving First Nations children 12-15 years old in Canada (excluding Quebec) in 2019

³Fallon, B., Lefebvre, R., Trocmé, N., Richard, K., Hélie, S., Montgomery, H. M., Bennett, M., Joh-Carnella, N., Saint-Girons, M., Filippelli, J., MacLaurin, B., Black, T., Esposito, T., King, B., Collin-Vézina, D., Dallaire, R., Gray, R., Levi, J., Orr, M., ... Soop, S. (2021). *Denouncing the continued overrepresentation of First Nations children in Canadian child welfare: Findings from the First Nations/Canadian Incidence Study of Reported Child Abuse and Neglect-2019*. Ontario: Assembly of First Nations.

Figure 2 presents the five most frequently noted child functioning concerns for First Nations children aged 12-15 years old in Canada in 2019 (excluding Quebec). In 58 percent of investigations involving First Nations children 12-15 years old the investigating worker noted at least one child functioning concern. The most frequently noted child functioning concern for First Nations children in this age group was depression/anxiety/withdrawal, and this was noted in 37 percent of investigations.

Ongoing Services

Workers were asked to indicate if, after the initial child welfare investigation, the case was closed or kept open for ongoing child protection services. As shown in Figure 3, 37 percent of investigations involving First Nations children aged 12-15 years old were kept open for ongoing child welfare services.

Placement

Workers were asked to indicate whether the investigated child remained at home or was placed in out-of-home care during the child welfare investigation. Twelve percent of investigations involving First Nations children aged 12-15 years old involved a placement for the child (see Figure 4).

When a worker indicated that a placement was made during the child welfare investigation they were asked to specify the type of placement. Figure 5 shows the types of placements in investigations involving First Nations children aged 12-15 years old in Canada in 2019. Nearly half of all placements made in investigations involving First Nations children in this age group (48 percent) involved an informal placement (i.e., kinship out-of-care or customary care). Foster care and kinship in care placements each represented 21 percent of placements for First Nations children 12-15 years old.
